FIGURE E-8: DFW SEISMOMETER DEPLOYMENT (FIGURE 1 OF JANSKÁ AND EISNER, 2012)

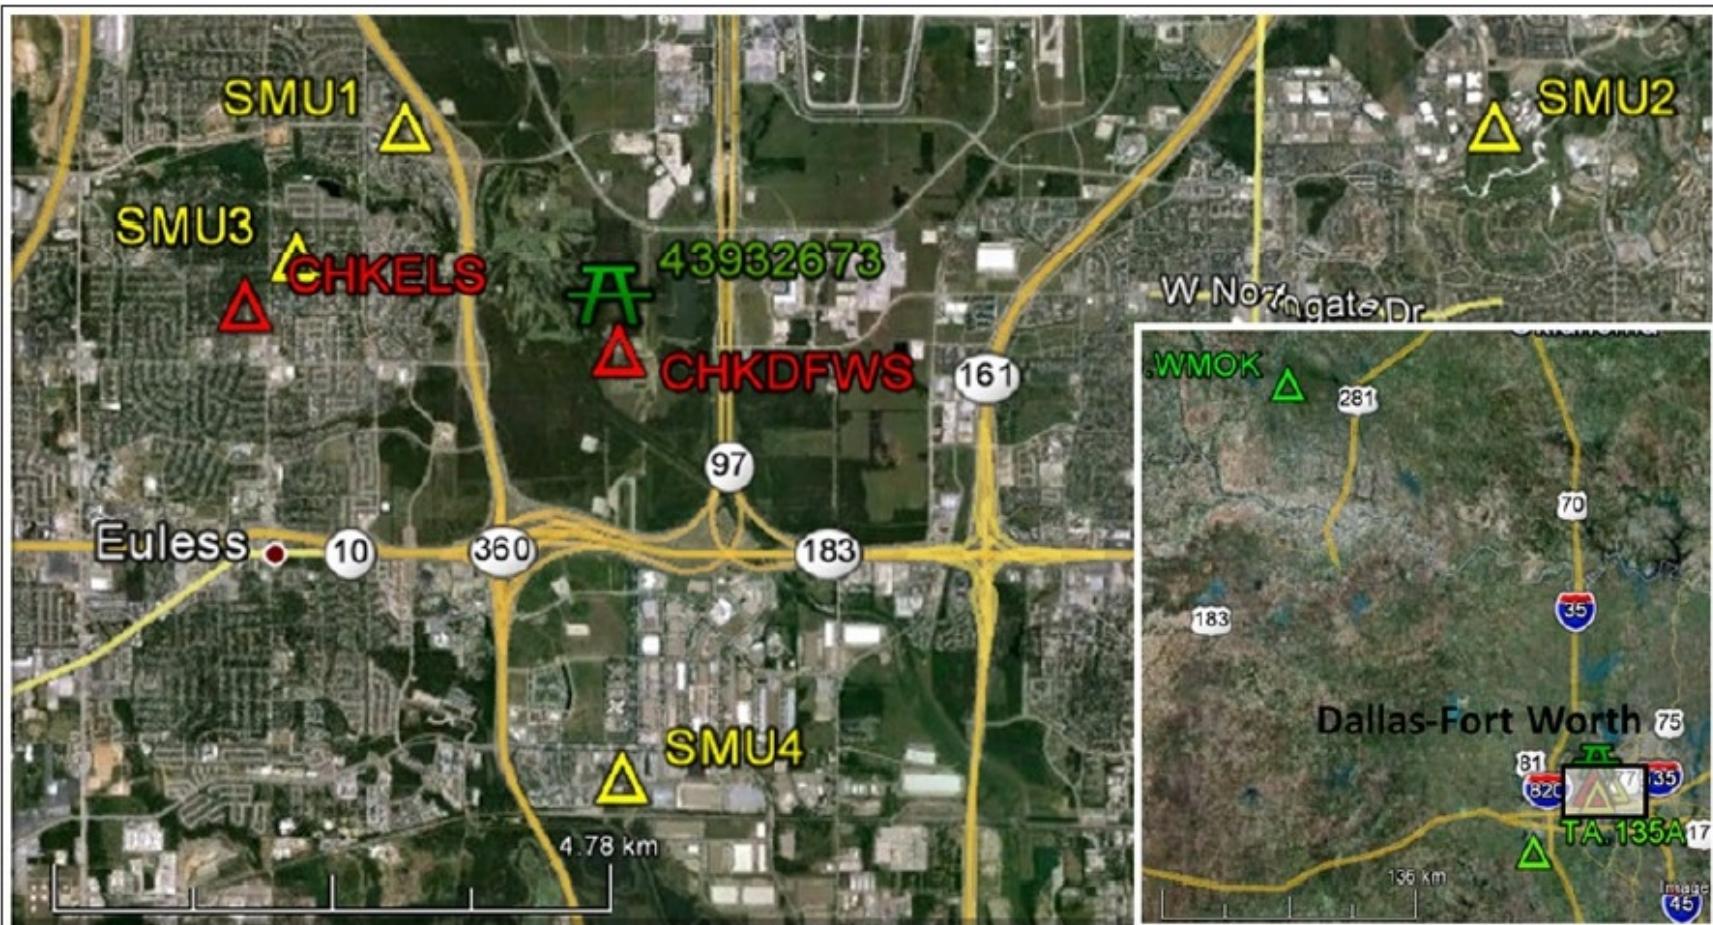

Figure 1. Dallas-Fort Worth (DFW) area and regional seismic WMOK and TA. 135A stations in lower right inset. Red and green triangles represent currently recording stations. Yellow triangles represent temporary stations operated by South Methodist University (SMU). The picnic table symbol stands for the injection well (API 43932673).

FIGURE E-16: CLEBURNE FOCUS AREA SEISMICITY MAP

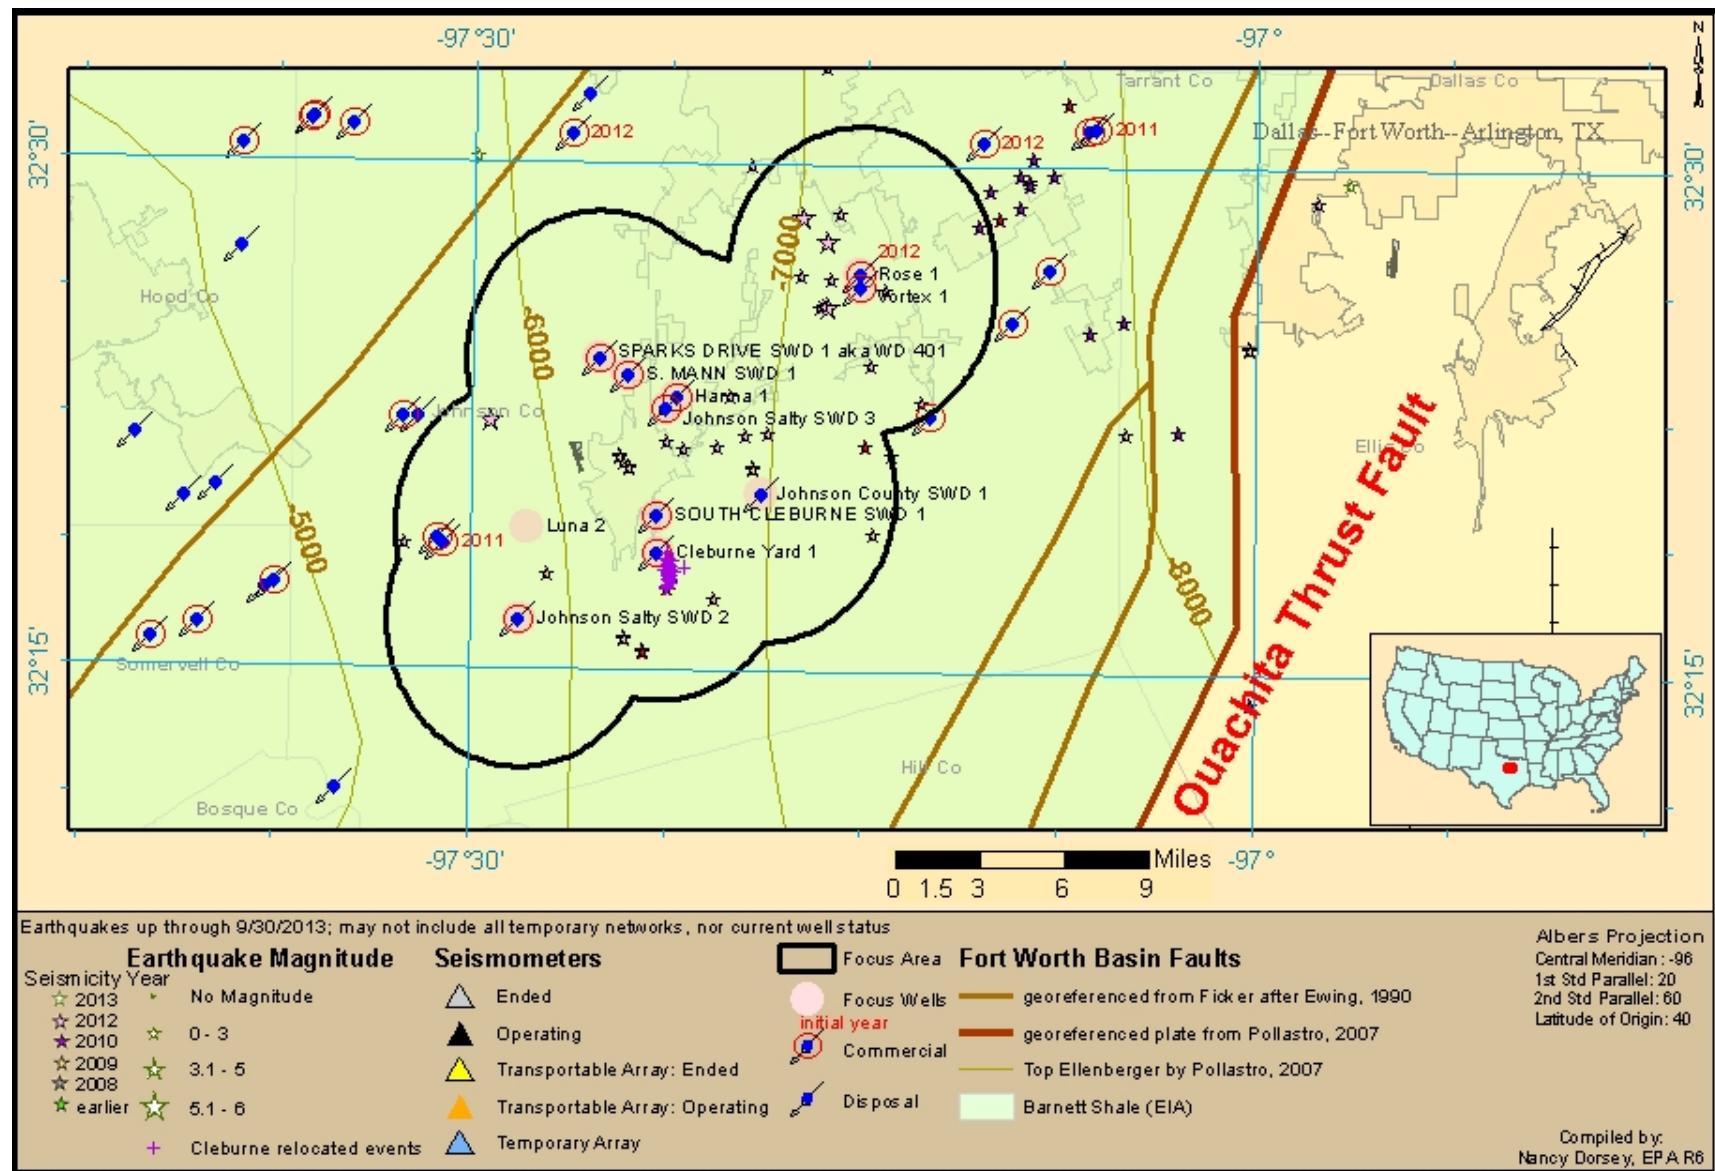

FIGURE E- 17: CLEBURNE FOCUS AREA SEISMICITY TIMELINE

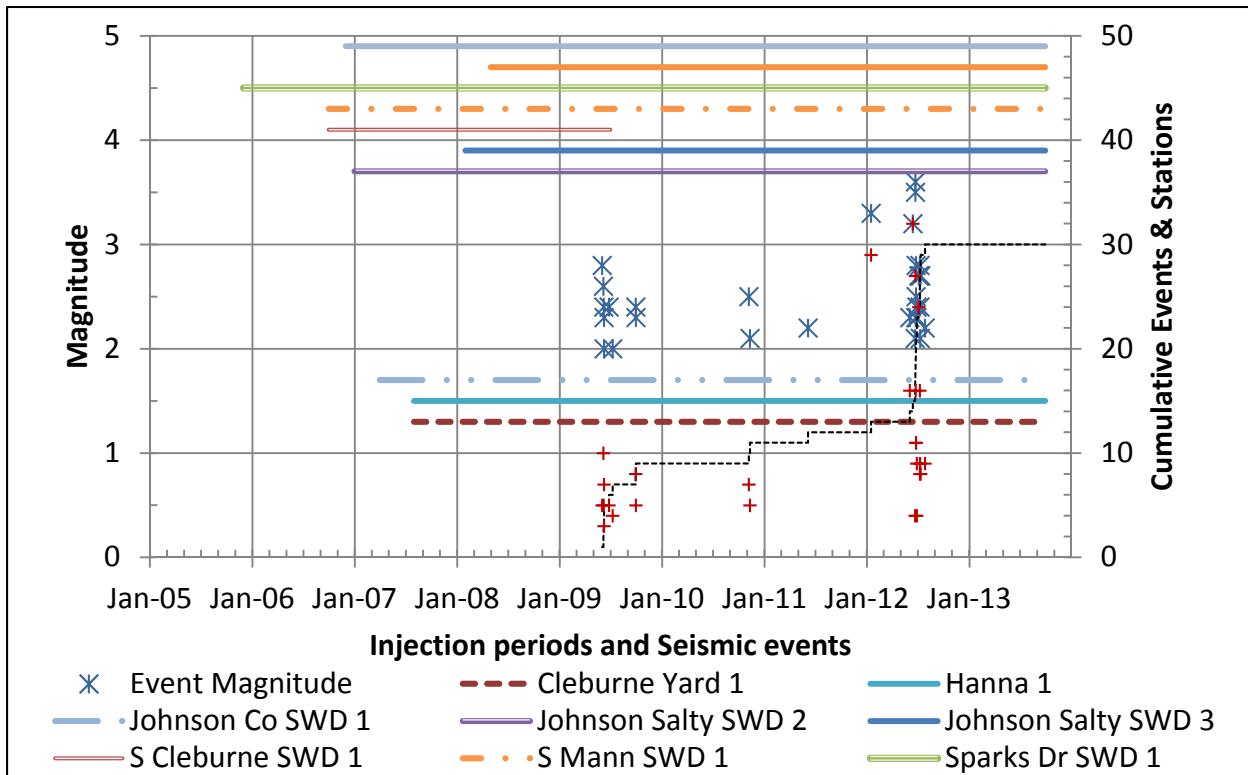

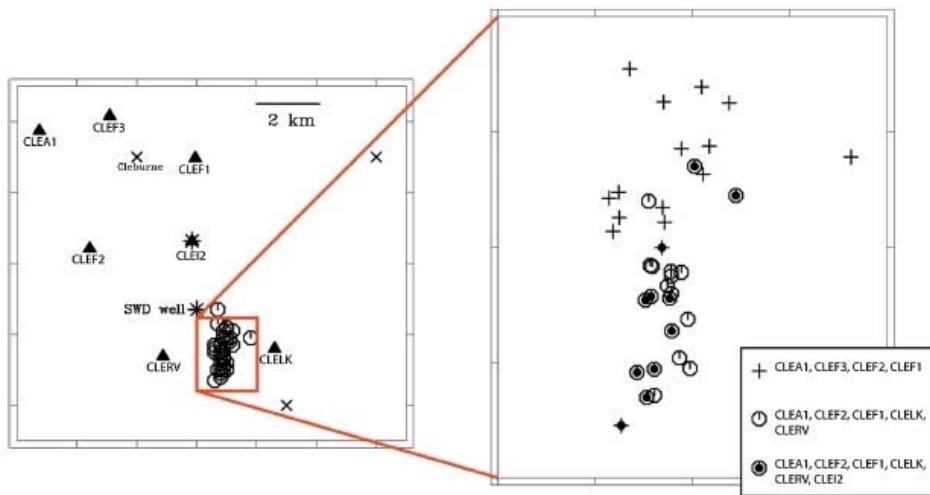

FIGURE E- 18: CLEBURNE SEISMOCHMETER DEPLOYMENT AND EVENT RELOCATION (FIGURE 4 OF HOWE-JUSTINIC ET AL., 2013)

**Figure 4.** Final event locations determined from data recorded by the local network. Triangles are seismic stations; plus symbols, octagons; circles, earthquakes; and asterisks, injection disposal wells. Events located using data from the initial four stations (plus symbols) are more northward. Events locations using the final network configuration (circles) should be more reliable because stations surrounded the events. Note that locations form an approximate north-south trend about 2 km long, with a saltwater disposal well (API 42-251-31266) situated about 1.3 km from the trend.

Howe Justinic, A. M., B. S. Stump, C. Hayward, and C. Froehlich (2013). Analysis of the Cleburne earthquake sequence from June 2009 to June 2010: Bulletin of the Seismological Society of America, v. 103 n. 6, p. 3083-3093. doi:10.1785/0120120336
